

Access controls worksheet

	Note(s)	Issue(s)	Recommendation(s)
Authorization /authentication	• <i>The event took place on 10/03/23.</i> • <i>The user is Legal/Administrator.</i> • <i>The IP address of the computer used to login is 152.207.255.255.</i>	• Lack of Offboarding Procedures: The company failed to revoke the former employee's system access after their departure, allowing them to log in and manipulate financial data. • Violation of Least Privilege: The business uses a single shared cloud drive for all employees. This means that all employees (including those who don't work in finance or HR) have unrestricted access to highly sensitive files, such as payroll.	• Implement Formal Offboarding Procedures: Create a strict checklist to ensure that all user accounts, access rights, and cloud drive permissions are immediately revoked the moment an employee's contract is terminated. • Implement Role-Based Access Control (RBAC): Restrict access to sensitive directories (like finance, payroll, and HR) so that only authorized personnel who need that data to perform their daily jobs

			can access it. • Enforce Multi-Factor Authentication (MFA): Require MFA for all cloud drive logins to add an additional layer of security, making it much harder for unauthorized users or compromised accounts to access the network.
